Other Research Projects

- **Domain-Aware Adversarial Level Selection for Multi-Scene RL**
  Supervisor: Prof. Liang Zheng *Jul' 20–Nov' 20*
  - Developed an adversarial level selection strategy for achieving **better sample complexity and episode rewards** on multi-scene environments like OpenAI ProcGen and AI2THOR based visual navigation task.
  - **Reduced the source to domain gap** by using a perpetual RL model for minimizing the KL divergence between sample distributions for the training and validation game level trajectories.

- **Exploring Semantic and Depth Penalties for Sketch Generation**
  Research Project with Dr. Dylan Campbell *Jul' 20–Nov' 20*
  - Used model-based RL with a depth variance penalty to **enhance depth perception** in generated sketches.
  - Designed a semantic entropy reward function to discourage strokes traversing multiple object boundaries.

- **Connected Stories of Australia: Project with National Museum of Australia**
  Supervisor: Prof. Emmaline Lear *Jul' 19–Nov' 19*
  - Developed a machine learning and design thinking based solution for improving organisation of historic artifacts within NMA's database and increase the outreach of their public API.
  - The final prototype poses as an online interactive treasure hunt, with an NLP based backend for learning sparse concept associations.

- **Finetuning CNNs using Neural Activation Data**
  Independent Study: IIT Delhi *Jul' 16–Jun '17 & Jan' 19–May' 19*
  - Demonstrated significant correlation between **representational dissimilarity matrices (RDM)** for **IT cortex activations** and higher-order CNN features.
  - Showed the importance of inter-class correlations between model features for popular CNN architectures.
  - **Improved the linear SVM accuracy** for penultimate layer features from the Squeezenet model by **9.86 %** on the Cadieu dataset using a novel RDM loss finetuning approach.

- **Face Detection and Recognition**
  Undergraduate Thesis: IIT Delhi *Jul' 16–May' 17*

- Proposed a novel face recognition approach which uses **Spatial Transformer Networks** along with traditional Facenet pipeline in order to introduce translational and rotational invariance for input images. This resulted in an **improvement of 1.37%** in accuracy over the Facenet model.
- Came up with a unique approach to **combine 3D facial reconstruction and face recognition** in an end to end pipeline, in order to account for the variations in 3D structure and facial pose.
